

PARTICLE COMPARISON CHART: TEXWIPE ALPHA 10 vs FOAMTEC INTERNATIONAL MIRAWIPE

In this demonstration the surface particles were read using the Q3 Particle counter on two side-by-side TxZ Chambers (CH-1 & CH-2). Chamber 1 had an average reading of 11.9 particles at 0.3Microns, Chamber 2 had an average reading of 63 particles at 0.3Microns. Chamber 1 was then wiped out using IPA with the Texwipe Alpha 10 Wiper, while Chamber 2 was wiped out using IPA with the Foamtec MiraWIPE. Surface particle readings were taken again using the Q3 Surface Particle counter. Chamber 1 showed an average of 2.87 Particles at 0.3Microns - A 87.9% Reduction of Particles when using the Alpha 10 Chamber 2 showed an average of 0.64 particles at 0.3Microns - A 98.6% Reduction of Particles when using the MiraWIPE.
